

appload

Try content downloading on IBC Wireless Java Conference!

Amsterdam, May 8-9, 2003.

The Appload Content Server (ACS) is on tour with Siemens: ACS will be used by the conference sponsor, Siemens Information and Communication Mobile, in their “Kids and Fun” stand for demonstrating content downloading.

The Wireless Java Conference in Amsterdam will give you the opportunity to visit the Siemens ICM booth and see live demonstrations of the many possibilities and the fun about mobile content downloading! Appload will also have represents at the show answering any questions that you might have. For contact please call our Stockholm office at +46-8-442 09 32 and we will help you set up a meeting.

Appload is a rapidly growing player in mobile application delivery. It develops and markets the Appload Content Server (ACS) to enable mobile operators and portals to deliver multiple content types (Java applications, polyphonic ringtones, screen savers, wallpapers etc.) to mobile subscribers using several channels (WAP, SMS, MMS; WAP Push). Appload efficiently and securely handles the content flow from content provider upload right down to the end-users' handsets. For more information please visit www.appload.com

For more information about the conference please visit: www.ibctelecoms.com

Welcome to try us out!
